

Senior Engineer Ship Structures

The Senior Engineer Ship Structures is an experienced ship structure engineer with in-depth understanding of analysis and arrangement of ship structures. You are a team-player and have a strong passion for both the technical and the commercial part of the job. The mindset is innovative with a strong passion for cost-efficient solutions.

Main tasks:

- Be a central resource in Sirius Design & Integration's concept design development.
- Take responsibility for delivery of high-quality basic design structure packages.
- Technical support and discussions with the Shipyard, Shipowner, and the Project team.
- Follow up and QA of external suppliers delivering engineering services in Sirius projects.

Background/qualifications

- MSc or Bsc
- Relevant experience

Personal skills:

- Creative, with a passion for cost-efficient ship structures
- High work capacity
- Manages to keep an overview while keeping your eyes on details
- Manages to translate visions into action
- Good at establishing understanding with external resources
